OFF TO SCHOOL
TAX BREAKS FOR EDUCATION
OFF TO SCHOOL: Tax Breaks for Education

As the cost of education continues to climb year after year, a number of valuable education tax breaks can help ease the pain. Educational incentives have the ability to provide significant tax relief for individuals and families. For parents, students, working individuals, or those making plans now to save for education down the road, it is never too early – or late – to prepare for the costs of education.

The Tax Code provides some lucrative education tax breaks, and getting the most from these tax incentives requires careful planning, especially because of the overlap between many different tax rules. Nevertheless, in many instances these education tax breaks can help you maximize your overall tax savings.

This guide provides an overview of many popular, tax-smart ways of paying for education. It covers:

- Education tax credits;
- Deductions for higher education expenses;
- Student loan interest deduction;
- Coverdell education savings accounts;
- 529 plans;
- Scholarships;
- Employer educational assistance;
- Business expense deduction;
- Tax-exempt bonds;
- *Uniform Gift To Minors Act* brokerage accounts; and
- Using retirement savings to pay for education.

EDUCATION TAX CREDITS

Two tax credits can be used to lessen the cost of education after high school. These credits, the Lifetime Learning Credit and the HOPE Scholarship Credit (which has been temporarily renamed the American Opportunity Tax Credit (AOTC) for 2009 and 2010, only), can help with the costs of tuition and fees of post-secondary education. The 2009 *Recovery Act* temporarily enhanced and extended the HOPE Credit for 2009 and 2010, but left untouched the more inclusive Lifetime Learning Credit.
American Opportunity Tax Credit

The AOTC generally allows eligible taxpayers to claim a nonrefundable credit against federal income taxes for tuition and related expenses for the first two years of post-secondary education for each eligible student. However, for 2009 and 2010, the AOTC is temporarily extended and enhanced to apply for all four years of college and is made partially refundable under the 2009 Recovery Act.

For 2009 and 2010, the AOTC provides a maximum amount of $2,500 per year for all four years of college (up from $1,800 per year). The credit is equal to 100 percent of the first $2,000 in qualifying higher education expenses, plus 25 percent of the next $2,000 of eligible expenses.

Under the 2009 Recovery Act, 40 percent of the credit is refundable in 2009 and 2010. However, if the taxpayer claiming the credit is a child who has unearned income subject to the “kiddie tax,” none of the credit is refundable.

Comment. Prior to the 2009 Recovery Act’s modifications, the HOPE Credit was equal to 100 percent of the first $1,000 of qualified tuition and related expenses and 50 percent of the next $1,000 of such expenses. The amounts are adjusted for inflation annually and without the 2009 Recovery Act’s enhancements, the inflation adjusted cap on qualified expenses for 2009 would have been $1,200 and the maximum HOPE Credit amount for each eligible student would have only reached $1,800.

Eligible students

To qualify for the AOTC, tuition must be paid on behalf of the taxpayer, the taxpayer’s spouse, or dependent. A student must be enrolled, on at least a part-time basis for at least one academic period during the year, in a degree, certificate or other program leading to a recognized educational credential at an eligible educational institution.

Qualifying educational institutions

The AOTC must be used for higher education. An eligible educational institution includes most types of accredited post-secondary institutions that offer credit towards a bachelor’s degree, associate’s degree, or other recognized post-secondary credential. Proprietary institutions and vocational schools may also qualify. Graduate school degrees are not covered.

Qualifying expenses

While expenses that qualify for the credit must be for tuition and related expenses, the 2009 Recovery Act expanded the definition of expenses to include “course materials.” The AOTC can be claimed for tuition, fees and course materials in 2009 and 2010, including the
cost of books and other required materials for a course. As in the past, however, the cost of room and board while away at college is not a covered expense for the credit.

**Income phase-outs**

For 2009 and 2010 only, the AOTC begins to phase out (is reduced) for married couples filing jointly with adjusted gross income (AGI) between $160,000 and $180,000. The credit begins to phase out for single individuals with AGI between $80,000 and $90,000. The American Opportunity Tax Credit is not available to married couples who file separate returns.

The AOTC is ratably reduced by the amount bearing the same ratio to the credit as to the excess of the taxpayer’s modified AGI over $80,000 (or $160,000 for joint returns) bears to $10,000. While this may sound complicated, an example may help.

**Example.** Thomas is a full-time student in 2010 at a college with tuition and related expenses of $10,000. Thomas’ widowed mother, Roberta, pays for his tuition at the college and wants to claim the American Opportunity Tax Credit on Thomas’ behalf. Roberta’s AGI for 2010 is $82,000. The ratio of the excess of Roberta’s AGI over $80,000 ($2,000) to $10,000 is 1/5 ($2,000/$10,000 = 1/5). The $2,500 American Opportunity Tax Credit claimed by Roberta is therefore reduced by 1/5, so she can only claim a $2,000 credit ($2,500-(1/5 x $2,500) = $2,000).

**LIFETIME LEARNING CREDIT**

The Lifetime Learning Credit is equal to 20 percent of up to $10,000 of qualified tuition and related expenses. The expenses must be paid by the taxpayer during the tax year for education furnished to an individual during any academic period beginning in the tax year. Thus, the maximum credit amount per taxpayer return is $2,000. These amounts are not indexed for inflation. For purposes of calculating the Lifetime Learning Credit for any given year, the determining factor is when the tuition was paid, not when the classes took place.

**Example.** A married couple prepaid their daughter’s tuition in the fall of 2009 for classes to be held in the 2010 spring semester. The tuition is used to calculate the Lifetime Learning Credit for the year when the tuition payments were actually made (2009), which is the year prior to the year she actually attended classes (2010).
**Per-taxpayer credit**

Unlike the AOTC, the Lifetime Learning Credit is a *per-taxpayer* credit, and does not change based on the number of qualifying students. The Lifetime Learning Credit and the HOPE Credit cannot be taken for the same tax year; in effect, they are “either/or” credits because expenses claimed with regard to the HOPE Credit cannot also be taken into account for purposes of the Lifetime Learning Credit.

**Qualifying students and schools**

The Lifetime Learning Credit is available for an unlimited number of tax years, as well as for a wider range of education expenses. The credit can be claimed for expenses incurred to pay for undergraduate or graduate-level and professional degree courses, including expenses for courses of instruction at an eligible educational institution to acquire or improve job skills, even if it is not part of a degree program or the student is not enrolled on at least a part-time basis. The Lifetime Learning Credit is thus allowed for a student who has just graduated from high school and is taking a single course at a community college.

**Income phase-outs**

The Lifetime Learning Credit also phases-out as a taxpayer’s adjusted gross income (AGI) rises. For 2010, the credit begins to phase-out for joint filers with AGI over $100,000 ($50,000 for individual filers).

**HIGHER EDUCATION EXPENSE DEDUCTION**

The higher education expense deduction is a popular, but temporary, tax break for qualified tuition and related expenses that has been extended year after year by Congress. It can benefit both itemizers and non-itemizers because it is an above-the-line deduction.

The higher education deduction expired at the end of 2009 and Congress has not extended the tax break through 2010. However, Congress is working on legislation to extend a number of temporary tax breaks, like the higher education deduction. If passed, Congress can retroactively extend these tax provisions to January 1, 2010.

**Qualifying expenses**

The higher education expense deduction can be claimed for tuition and academic fees, but cannot be taken for the cost of books or room and board. Additionally, the amount of expenses you claim must be reduced by distributions excluded from income from a state tuition plan (i.e. a “529 plan” or “qualified tuition program,” discussed in further detail later), an education savings account, or interest on an education savings bond. If tuition
fees are too low to claim the full amount, taxpayers can claim tuition from the first three months of the following year.

**Eligible individuals**

You can claim the deduction for education expenses of yourself, your spouse, or your dependent. Your dependent cannot claim the deduction, and married taxpayers filing separately cannot claim the deduction.

*Cautions.* You cannot claim both the higher education expense deduction and either of the education tax credits (HOPE Credit or Lifetime Learning Credit). These education incentives are either/or tax breaks.

The maximum amount of the higher education deduction is two-tiered based on the level of your adjusted gross income (AGI). For example, if you are single or head of household in 2009 (the last year for the deduction, unless retroactively extended for 2010), you can claim a deduction of $4,000 if your AGI, exclusive of the higher education deduction, does not exceed $65,000, and a deduction of $2,000 if your AGI does not exceed $80,000. Above $80,000, the deduction is phased out. For joint returns, the AGI limits are doubled: $130,000 for a $4,000 credit; $160,000 for a $2,000 credit.

**Note.** You cannot claim the deduction if your filing status is married filing separately.

**Credits or Deductions—Which Is Best?**

You cannot “double-dip” when it comes to claiming education tax breaks. For example, if you receive a tax-free scholarship, you cannot claim those same expenses covered by the scholarship as expenses eligible for a tax credit or a deduction.

If you are paying for an education expense out-of-pocket, remember that payment can take a variety of forms: cash, credit card, a distribution from an education IRA, and even the type of “financial aid,” which represents a loan with a reduced interest rate. Also, look at your tax bracket.

**Deductions**

A deduction decreases adjusted gross income (AGI), which in turn is used to regulate the amount of other “itemized deductions,” such as the medical deduction.

**Credits**

A credit reduces your overall tax bill dollar for dollar. For most people, a
credit is more beneficial than taking a deduction – but only if the same amount of expense would qualify as an either-or choice. Usually, you will need to decide between a deduction having a higher dollar amount and a credit with a lower dollar value.

**Example.** You are in the 25 percent tax bracket. You have a choice between claiming a $1,000 deduction or a $250 tax credit. Which one should you take? You will save $250 ($1,000 x 25 percent) in taxes, taking the deduction. If you claim the credit you will save $250, too. If you have any deductions dependent on adjusted gross income, however, taking the education expense deduction may make the most sense. On the flip side, if you are in the 15 percent tax bracket, you would only save $150 ($1,000 x 15 percent) by taking the deduction so you would be better off claiming the $250 credit.

**STUDENT LOAN INTEREST DEDUCTION**

If you have to borrow money to pay for school, you can take an above-the-line deduction for up to $2,500 a year for interest on education loans. As an above-the-line deduction, it is not limited to taxpayers who claim itemized deductions. Moreover, there is no longer a rule limiting the interest deduction to only the first 60 months that interest payments are required.

**What loans qualify?**

Any debt incurred to pay higher education expenses for:

- You;
- Your spouse; or
- A person who was a dependent when the debt was incurred.

**Caution.** If you are claimed on someone else’s tax return as a dependent, then you cannot claim the student loan interest deduction. In addition, only the person who is liable for the loan can deduct the student loan interest. For example, if your child takes out a loan to pay for her college expenses, only your child can deduct interest on the loan, even if you pay the interest.

**Income phase-outs**

Not everyone can take the student loan interest deduction. Eligibility depends on your income. For 2010, the maximum $2,500 deduction for student loan interest phases out for single individuals with modified AGI between $60,000 and $75,000, and for joint filers with modified AGI between $120,000 and $150,000.

**Interaction with other benefits**

You may claim the HOPE or the Lifetime Learning Credit for expenses paid for with a student loan. In determining if the student loan was used for qualifying higher education expenses, you
must subtract from your total qualifying expenses any U.S. savings bond interest deducted under the Education Savings Bond program, any withdrawals from a Coverdell Education Savings Account (ESA), and distributions from a qualified tuition program (QTP) used to pay higher education expenses and excluded from your taxable income.

**QUALIFIED TUITION PLANS**

Qualified Tuition Plans (QTPs), also known as “529 plans,” are popular tax-favored education savings vehicles. A QTP is a plan that is established to allow you to either prepay, or contribute to, an account established solely for paying a student’s qualified education expenses at an eligible educational institution. Once limited to state programs, QTPs have been expanded to include prepaid tuition programs established and maintained by eligible private institutions that satisfy requirements under Code Sec. 529.

As a result, there are actually two types of QTPs: savings account programs and prepaid tuition programs. However, you cannot make contributions to both. Each type of program is discussed in further detail below.

<Comment> The economic downturn has taken its toll on many 529 plans, as parents’ ability to put money away for college takes a back seat in many households to paying day-to-day expenses. However, a small contribution can go a long way in the long-term. Many plans are offering a wider range of investment options and lowering various fees to attract participants. 

<Comment> For 2009 only, 529 plan participants were allowed to change their investment strategy twice during the 2009 calendar year, as opposed to only once. The modification was a direct result of the economic downturn’s effect on individuals’ portfolios. However, this benefit has not been extended into 2010.

**Plan contributions.** Contributions to QTPs are not deductible. The QTP itself is generally exempt from tax. Contributions made to a 529 plan must be in cash. These contributions are generally treated as completed gifts for purposes of the annual gift tax exclusion.

**Distributions and rollovers**

Distributions that are used to pay the beneficiary’s qualified education expenses are tax-free. Other, nonqualified
distributions are included in the beneficiary’s income, and are subject to a penalty. Rollovers from one QTP to another are tax-free if made for the benefit of the same beneficiary or for related beneficiaries. A QTP can also be transferred tax-free to a member of the beneficiary’s family.

**No income phaseouts.** Many more people can take advantage of 529 plans because there are no income phase-outs, unlike other education tax incentives.

**Qualified expenses**

Qualified higher education expenses for purposes of 529 plans have been expanded to include computers, computer technology, including internet access, for 2009 and 2010 only. This also includes computer software, peripheral computer equipment and fiber optic cable related to computer use.

*Comment.* The American Recovery and Reinvestment Act (2009 Recovery Act) temporarily expanded for 2009 and 2010 the types of expenses that qualified distributions may be used for to include computer and computer equipment.

The temporary, expanded definition of computer equipment specifically excludes computer software designed for games, sports or hobbies, unless the software is “predominantly educational in nature.”

**Plan types**

There are two types of 529 plans. One is known as a qualified tuition program, (also known as a prepaid tuition program or a guaranteed tuition program). The second type of 529 plan is a savings account.

**Qualified tuition programs**

The first type of 529 plan lets you save for a child’s education by paying a lump sum or a monthly installment to a trust operated by your state, then naming the child as the beneficiary. What you’re doing is paying for future tuition at today’s prices.

*Caution.* Some states do not guarantee the contract, so there is a risk the trust fund could become insolvent.

*Caution.* Using a prepaid tuition program can reduce a student’s eligibility for aid such as subsidized loans, work-study, or certain grants. The federal government considers prepaid tuition as a resource reducing a student’s financial need on a dollar-for-dollar basis.

Distributions from a state prepaid tuition program are tax-free so long as they are used for qualified education expenses. That means tuition, supplies, equipment, and books.

Contributions generally are treated like gifts. For example, a $50,000 lump sum contribution can be treated as if made over a five-year period.
Savings account plan

The second type of 529 plan lets you make contributions to a state-managed savings account for the benefit of a beneficiary you designate. There are usually a number of investment options. Typically, you can use the money you save to pay for out-of-state schools as well as in-state schools.

COVERDELL EDUCATION SAVINGS ACCOUNTS

Coverdell Education Savings Accounts (ESAs) are another way to save and pay for education. To get real tax savings, you generally need to plan long in advance of when you’ll need the money. It is wise to start this sort of account at least five years before you intend to use it; starting when the student is an infant is even better.

Coverdell ESAs are very taxpayer-friendly. The account balance is never taxed, not even to the student, when it is used for qualified education expenses. You can contribute up to a maximum of $2,000 each year. Contributions are not tax deductible, however, and must be made in cash. Amounts not used to pay for qualified education expenses are considered income to the individual who receives the payment or distribution from the account, and subject to tax, as well as an additional penalty.

Comment. An ESA can only be established for a qualified beneficiary under the age of 18, or a special needs beneficiary.

Educational institutions

Coverdell ESAs can be used not only for college costs but also for elementary and secondary school education expenses. The student can attend a public, private or religious school.

Eligible expenses

Eligible expenses include, among other things, tuition, fees, books, and supplies. They also include room and board for a student enrolled at least part-time.

Income phaseouts

ESAs have higher income phaseouts:

- The contribution limit is phased out for married couples filing jointly with adjusted gross incomes (AGI) between $190,000 to $220,000.
- The AGI phaseout range for single individuals is $95,000 to $110,000.
What if I cannot use a Coverdell ESA?
If your AGI is too high to qualify for a Coverdell ESA, you could ask a relative or friend, whose AGI is lower, to make the contributions. You could also give the money to the beneficiary as a gift and then have him or her make the contributions.

SCHOLARSHIPS
If you receive a scholarship, it may or may not be included in your income depending upon the terms of the scholarship. A scholarship—whether need-based or for academic or athletic abilities—generally will not be included in your income if:

- You are pursuing a degree at an educational organization; and
- You use the scholarship for tuition and certain expenses.

Caution. If you receive a scholarship as payment for research, teaching, or other services, then these payments may be taxable income.

Qualification requirements
To be considered as someone who is “pursuing a degree,” you have to receive a scholarship for study at an educational institution meeting certain requirements. Besides students attending either primary or secondary schools, or students at a college or university pursuing a degree, you will be considered a full or part-time student pursuing a degree if you receive a scholarship to study at an educational institution that is:

- Acceptable for full credit toward a bachelor’s degree or a higher degree, or is a training program preparing students for gainful employment in a recognized occupation;
- Government authorized; and
- Accredited.

Example. You are a scholarship student at a technical school studying aircraft maintenance. The school has state authorization and is also accredited. You qualify as a person pursuing a degree and you can exclude, from your gross income, your scholarship.

Caution. Only the portion of your scholarship that you use to pay tuition, fees, supplies, equipment, and books is excluded from your income. Room and board isn’t excluded.

EMPLOYER-PROVIDED EDUCATIONAL ASSISTANCE
If your employer helps with education expenses, you may be able to exclude from your income up to $5,250 in employer provided educational assistance. You can now use employer-provided educational assistance for graduate school. Sometimes, courses covered by your employer’s program don’t always have to relate to your job. If they are related, you can also deduct any costs not reimbursed as a business expense deduction, provided you itemize.
BUSINESS DEDUCTION FOR WORK-RELATED EDUCATION COSTS

If the tuition and fees incurred by a student-employee are not deductible under the higher education deduction, they may be deductible as ordinary and necessary business expenses. Unlike the higher education deduction, however, job retraining to qualify you for another line of work is not covered as a business expense deduction. Tuition, training, and similar costs associated with entering a new line of work are not deductible. Similarly, education costs to obtain a professional license are generally not a deductible business expense.

Continuing education

Education costs incurred to improve the employee-student’s skills or to satisfy continuing education requirements may be deductible. Such costs include continuing education courses or advanced degree costs for a field that the individual has already entered. Deductible costs also include education costs undertaken to meet the express requirements of the employer or of a law or regulation imposed as a condition to retain employment, status or rate of compensation.

Seminars and conferences

Costs associated with attending seminars, conferences, conventions, and similar education courses are subject to strict substantiation requirements if you otherwise qualify to take them as a business expense. If the meeting or conference is conducted in certain countries or locations, the substantiation requirements are even more strict.

Reimbursed expenses

If the student-employee’s education expenses are reimbursed by the employer, the amount of the reimbursement can be excluded from the employee’s income. If these costs are not reimbursed, they are treated as deductible unreimbursed employee business expenses.

If the costs are not reimbursed by the employer, a deduction may be available as the cost of producing income. The deduction can be claimed on Form 1040, Schedule C, by self-employed persons. Employees may claim the deduction for unreimbursed education expenses only if they itemize deductions on Schedule A. The deduction is subject to the 2 percent-of-adjusted-gross-income limit that applies to most miscellaneous itemized deductions.
SAVINGS BONDS

U.S. savings bonds are a popular way to save for education expenses and have some tax advantages. They are easy to buy and a safe investment because they are backed by the U.S. government. However, a child can’t purchase a bond for his or her own eventual use.

Caution. When savings bonds are redeemed to pay expenses for higher education, the interest may be excluded from your income if your income is below a certain range. For 2010, the phaseout range begins at $70,100 of modified AGI for individual filers and at $105,100 for married couples filing jointly.

You can redeem savings bonds to make contributions to an Education Savings Account or a qualified tuition program without incurring tax consequences.

Higher educational expenses for tax purposes are tuition and fees required for enrollment or attendance of you, your spouse or your dependent at any eligible educational institution. Eligible educational institutions include most public and nonprofit colleges, universities and vocational schools.

UGMA BROKERAGE ACCOUNTS

If you don’t want to lock funds into a 529 plan and your income is too high to take advantage of other tax-friendly savings vehicles, you should consider a Uniform Gift to Minors Account (UGMA).

You can give your child up to $13,000 tax-free ($26,000 if you and your spouse “split” each gift) in 2010. You can contribute enough just to cover tuition. However, once your child turns the requisite age (from 18 to 24, depending upon circumstances), he or she can take the money and use it for anything, not just education. This is a concern of many parents considering a UGMA.

The success of a UGMA depends on how you invest the money. Since investment earnings of a child under the kiddie tax are taxed at his or her parents’ marginal rate, the account must have as little taxable earnings as possible until he or she is out of kiddie tax range.

The kidde tax applies to children who are under age 18, or, if the child’s earned income does not exceed half of the child’s own support for the year, either 19 or, if a full time student, under 24. In any case, the child is out of the grasp of the kiddie tax for the entire tax year in which he or she turns the requisite 18, 19 or 24 years of age.

You can invest in stocks with low dividends and high potential appreciation. Since the gains are not taxed until the stock is sold, a UGMA would hold and continue to invest in stock until the child turns 24 (or 18 or 19, as the case may be), at which time the stock would be sold slowly over the course of the next three to four years, at the
child’s presumably low capital gain tax bracket rates.

*Example.* You give your daughter stock valued at $11,000 when she is two years old. If the shares are worth $75,000 when she turns 24 while in graduate school full time, you can have the shares sold for her gradually over the next three or four years and she will be taxed on the $64,000 gain, which usually will be at a lower capital gains rate than your bracket, especially if she continues full-time toward a graduate degree.

**WITHDRAWING FROM RETIREMENT SAVINGS**

Don’t withdraw money from a retirement savings plan unless you’re using it for retirement, since the amounts distributed are generally taxable as income and subject to a 10 percent penalty tax as well. That said, there are some very limited exceptions. Paying for higher education is one important exception.

You can use the money you saved in a retirement plan to pay for qualified higher education expenses. You can pay for tuition, fees, books, supplies and equipment. Room and board is also a qualified expense.

You can use your savings to pay for your educational expenses or the expenses of your spouse, child, or grandchild. Remember, however, that once you take the money out of your tax-favored retirement account you can’t put it back and, therefore, you permanently lose the benefit of having that amount continue to accrue tax-free before it’s needed.

**Not tax-free**

To take money out of an Individual Retirement Account (IRA), you need to show that a qualified higher education expense exists. For some retirement plans, however, the payout must also qualify as a hardship distribution. In either case, the distribution is not tax-free. It is added to your income and is taxed at your highest marginal income tax rate. The good news is there’s no penalty.

Some retirement plans allow participants to borrow against their savings. This may be another way to find short-term funds to pay for your child’s college education, but be careful. If you pay back the loan with interest, within five years, you don’t pay tax. If you don’t repay the loan, tax and penalties are due – a hefty price to pay if you have other options.

**CONCLUSION**

The variety of education tax incentives makes it possible for everyone to take advantage of one or more tax breaks to help finance educational costs. Many of the tax incentives can be combined to maximize the growth of your savings and minimize taxes. Your tax professional can help you create an education strategy using these tax incentives to their fullest extent.
